The application has been amended as follows:

-- Enter new dependent claims 87-102 to replace erroneously cancelled dependent claims 3-15 and 17-19.

87. (previously cancelled claim 3) The method according to claim 2, wherein the panel-opposing step further includes the step of supplying the adhesive material to at least one of the first panel element held on the first stage and the second panel element held on the second stage.

88. (previously cancelled claim 4) The method according to claim 2, wherein the panel-opposing step further includes the step of supplying the adhesive material to at least one of the first panel element held on the first stage and the second panel element held on the second stage and the step of moving at least one of the first stage and the second stage to bring the first and second elements to an opposed position with the adhesive material interposed there between.

89. (previously cancelled claim 5) The method according to claim 88, wherein the adhering of the first and second panel elements in the panel-adhering step is carried out by pressing a

Art Unit: 2833

pressing member against the first stage at the starting position via the first and second panel elements, and moving the first stage relative to the pressing member.

90. (previously cancelled claim 6) The method according to claim 89, wherein the second panel element is separated from the second stage when moving the first stage relative to the pressing member in adhering the first and second panel elements.

91. (previously cancelled claim 7) The method according to claim 2, wherein the panel-adhering step includes the steps of:

moving at least one of the first and second stages to position the first and second panel elements and to superimpose them over each other (panel-superimposing step);

at least partially separating the first and second panel elements positioned and superimposed over each other (panel-separating step);

supplying the adhesive material between the first and second panel elements thus separated; and

progressively adhering the separated first and second panel elements from the starting point via the adhesive material interposed between them (separated panel-adhering step).

92. (previously cancelled claim 8) The method according to claim 91, wherein in the panel-separating step, the first and second panel elements are separated at least so partially as to reproduce the state that the first and second panel elements are positioned and superimposed.

93. (previously cancelled claim 9) The method according to claim 92, wherein in the panel-separating step, the first and second panel elements are separated while the first and

Art Unit: 2833

second panel elements are held as superimposed in the vicinity of the starting position.

94. (previously cancelled claim 10) The method according to claim 93, wherein the first and second panel elements are held as superimposed by use of through-holes each formed in the first and second panel elements, respectively.

95. (previously cancelled claim 11) The method according to claim 92, wherein in the panel-separating step, the first and second panel elements are at least partially separated from each other while the second panel element is held by a holding member having a panel-holding convex curved surface, and, in the separated panel-adhering step, the first and second panel elements are adhered to each other by pressing the second panel element held by the holding member against the first panel element by using the holding member.

96. (previously cancelled claim 12) The method according to claim 1, wherein the adhering of the first and second panel elements in the panel-adhering step is carried out by initially pressing one of the first and second panel elements against the other element at the starting position, and then progressively extending a region to be pressed from the starting position.

97. (previously cancelled claim 13) The method according to claim 96, wherein an elastic pad having a pressing convex curved surface is used to press one of the two panel elements against the other element.

98. (previously cancelled claim 14) The method according to claim 97, wherein the elastic pad is formed of an elastic body having an elastic coefficient in the range of 60 kgf/cm^2 to 200 kgf/cm^2 .

99. (previously cancelled claim 15) The method according to claim 97, wherein the pressing

Art Unit: 2833

surface of the elastic pad has a radius of curvature in the range of 2000 mm to 5000 mm.

100. (previously cancelled claim 17) The method according to claim 1, wherein the starting position is located in the center of the first and second panel elements.

101. (previously cancelled claim 18) The method according to claim 1, wherein the adhering of the first and second panel elements in the panel-adhering step is carried out in an atmosphere of reduced pressure.

102. (previously cancelled claim 19) The method according to claim 101, wherein the pressure in the atmosphere of reduced pressure is 13 Pa to 14 Pa.
